

We are looking for Sr SOFTWARE DEVELOPER IN TEST

RESPONSIBILITIES

- Develop and document User Stories, including testing estimates and validation tests
- Write the test cases/scripts – ideally up-front but on a just-in-time basis per feature
- Develop, document, and maintain the test strategy and test scenarios
- Ensure the appropriate test environments are in place and controlled
- Partner with the developers to ensure all areas of the application are fully tested and issues are clearly logged and prioritized consistently
- Manage the defect log and ensure issues are resolved, including validation of the fix
- Analyze and determine proper testing procedures/processes for testing both hardware and software.
- Document and maintain testing methods and individual test cases.
- Participate in developer integration, system integration, and acceptance testing of all eCommerce applications
- Automate individual test scripts for replay on new releases
- Certify software functionality for new Production releases
- Work with Integration Build teams to manage developer and production release of software
- Provide exploratory testing to understand the feature and how it is implemented, to find additional or unexpected behavior, and to refine and define additional test cases for the feature

QUALIFICATIONS

- Bachelor's degree in computer science or equivalent experience
- Minimum five years testing experience, preferably in an Agile development environment
- Experience with Selenium
- Development experience is highly beneficial
- Experience with defect tracking tools (JIRA, Bugzilla, etc.)
- Experience with source control versioning systems (SVN, CVS, etc.)

LOCATION

Ann Arbor, MI
